

### Electrician Portfolio Wireframe

This is a website portfolio that will be utilized by an electrician in order to showcase work as well as services. The website will be available to clients in order to view prior projects, comments, as well as contact the electrician if they are interested in their services. The design is a responsive design in order to be available on a variety of screen sizes from phone to pc. The idea for this project is from a friend that is an apprentice electrician. The electrician wanted a website that would be a portfolio in order to present work in front of clients.

#### List of intended web components.

- Header: This would be used to show the electrician or electricians company name and branding
- Navigation Bar: This would house links to Home, About, Services, Portfolio and Contact.
- Hero Section: This is for a short introduction which could show who the electrician is and a call to action.
- Service section: This would be used to show a breakdown of services offered ex. Residential work, commercial work, or emergency repairs.
- Portfolio Section: This is where the electrician would show completed previous projects that they have done so clients can see the kind of work that is capable.
- Testimonial Section: This is to display feedback from previous clients almost like a reference check on the electrician.
- Contact Section: Here is where the electricians contact info, business details and service area would be.
- Footer: This would include links to all business information and social media links (ex. Facebook, instagram)
